

Matthews Paint EPA 6H Overview

The below products from MPC contain “target HAPs” as identified and regulated under the NESHAP 6H rule. All other MPC products are “target HAP” free. The four MPC etch primers listed are legal for use and will continue to be sold for those customers who plan to comply with the operating requirements

of the 6H rule. MPC has a variety of “target-HAP”-free primer options for those wanting to operate HAP-free, including a new chrome-free etch primer. Our 922 series toners and one pearl additive will be discontinued so that all MPC color topcoats will be guaranteed HAP free for all customers.

MPC Product That Contains Heavy Metal Content		
Product Code	Product Name	Notes
74734SP	Metal Pretreatment	MPC will continue to sell
74760SP	PT Filler	MPC will continue to sell
74770SP	HBPT	MPC will continue to sell
74780SP	HBEF	MPC will continue to sell
N922SP*	Burnt Umber	Discontinued 12/2010
SOA922SP*	Burnt Umber	Discontinued 12/2010
SV922SP*	Burnt Umber	Discontinued 12/2010
VOC922SP*	Burnt Umber	Discontinued 12/2010
MAP-LVS922*	Burnt Umber	Discontinued 12/2010
MAP-LVG922*	Burnt Umber	Discontinued 12/2010
287194SP*	Aquamarine Pearl	Discontinued 12/2010

*If you plan to make your operation “target HAP” free, you must eliminate ALL of the listed products from your operation and MSDS files. You must also eliminate all stock with mixed color labels, as these labels indicate the presence of “target HAPs” regardless of whether any are present in the mix (the only potential source would be 922 series toners or the pearl additive). If you have existing mixed color product that you are certain does not contain 922 series toners or the pearl additive, you may obtain “new” labels to replace your “old” labels so that you

do not need to destroy usable product. If you mix product for yourself or for resale, effective immediately all colors which do not contain 922 series toners or the pearl additive MUST be labeled with “new” labels identified in the left column below. Equally important, if you mix colors that contain 922 toners or the pearl additive, the can MUST be labeled with the “old” labels identified in the right column below.

Sell-Out Labels Without Heavy Metal
